

Endolite Introduces EchelonVAC for exceptional control and comfort.

Optimal socket connection is critical to an amputee's comfort, security and stability. By pairing Biomimetic Hydraulic Technology with an elevated vacuum system, the design of EchelonVAC works to create a secure and comfortable socket connection.

- Biomimetic Hydraulic Technology with integrated elevated vacuum
- No power required, quiet gentle operation
- Lightweight, compact design
- Low Build height
- E-carbon springs for efficient energy return
- Split toe design for ground compliance on uneven terrain
- Weatherproof

When used in conjunction with a Silcare Breathe liner, the vacuum is applied directly to the residual limb to further enhance the connection between the limb and the socket.

For more information contact Endolite at: 800.548.3534 or visit endolite.com

Switch to BOC today!

Why make the transition to BOC? Award-winning customer service, nationally recognized credentials, and a user-friendly website are just a few of the benefits

of choosing BOC. As your credentialing partner, we provide accreditation for your O&P facility at a discounted rate, guide you through the accreditation process, and support your future success!

Plus, it's easy and free! Make the switch to BOC accreditation for no up-front cost.

Contact us today at 877.776.2200 or info@bocusa.org. We're with you every step of the way. It's our promise. Every patient. Every facility. Every day.™

LEAP Balance Brace

Hersco's Lower Extremity Ankle Protection (LEAP) Brace is designed to aid stability and proprioception for patients at risk for trips and falls. The LEAP is a short, semi-rigid AFO that is functionally balanced to support the foot and ankle complex. It is fully lined with a lightweight and cushioning Velcloth interface. Easily secured and removed with 2 Velcro

straps and a padded tongue.

Visit Hersco.com for more info or call the lab toll FREE (800) 301 8275. www.hersco.com

Coyote Design has a new lower cost glue called "Smooth Adhesive."

This black glue has a slower set time than Coyote Quick Adhesive and it's easy to smooth.

- Longer set time with no sag
- Easy to smooth
- Stays flexible when cured
- Bonds well to fabric, plastic and metal
- Used for attaching componentry
- Ships non-hazardous
- Safe, no odor

Smooth Adhesive stays flexible after it is cured making it an excellent choice for attaching our CD101 Summit Liner Attachment to fabric backed liners.

Coyote Design's Smooth Adhesive has a 60 second set time and takes 5 to 7 minutes for a full cure.

For more information about our products contact Coyote Design at (208) 429-0026 or go to www.coyotedesign.com

Endolite Introduces Breathable Liner Technology for Drier Skin and Socket Security

The Silcare Breathe Silicone Liner features laser drilled perforations to allow moisture to escape, resulting in drier skin and a healthier environment for the residual limb. Managing moisture in this way

helps to reduce the damaging effects of friction and improve comfort and control.

- Stretch Zones – seamless technology provides bi-directional stretch to improve comfort and contouring and reduce shear force on the knee as it flexes.
- Laser Perforations – Optimally sized pores, distributed uniformly along the length and distal end of the liner permit the escape of air and moisture.
- Tendresse Finish – A lower coefficient of friction that standard silicone reduces shear stress on the skin.

For more information contact Endolite at: 800.548.3534 or visit www.endolite.com or silcareliners.com

Unloader Hip by Össur - World's First Brace for Patients with Hip OA

Unloader Hip® available from Össur® – the OA bracing innovators – is a revolutionary hip brace designed specifically for patients suffering from mild-to-moderate hip osteoarthritis (OA).

Unloader Hip is designed to optimize hip OA treatment in order to improve mobility and decrease pain.

The sleek, lightweight design includes Össur's patented SmartDosing® system, allowing patients to adjust the fit to best suit their comfort and activity level.

Pro-Flex® is more than a foot. It's a family.

By now you've heard that Pro-Flex generates exceptional mechanically powered toe-off, but did you know that all Pro-Flex XC & Pro-Flex LP also feature a unique 3-blade

design with a footblade that incorporates a full effective toe lever and a more anatomical split toe? This innovative design contributes to a more fluid and natural progression from heel strike to toe off than a conventional energy storing and return foot.

Pro-Flex XC offers excellent vertical compression, all-terrain compliance and toe-off energy for active users.

Pro-Flex LP provides full-height dynamics in a low profile foot for users with longer residual limbs.

Learn more about the Pro-Flex family at www.ossur.com/proflex.

Grace-FX Customs and Grace Prosthetic Fabrication Are Going Back to Basics!

We are making a few changes. Grace-FX Customs, will be moving the same roof as our current prosthetics fabrica-

tion warehouse. This will benefit communication and turn-around times. As well bringing our V.P. of Sales and co-owner Tony Culver back to operations for GPFINC. This is an exciting time for us. We hope to enhance your central fabrication experience in the coming months. We are committed to excellence in customer service and pride ourselves on superior quality. We will still be providing our Yeti Coolers, Ramblers and accessories as well as taking care of our Prosthetics and Orthotics Manufacturing company.

Symphony Knee: Harmony between Security and Fluidity

The Symphony is a 6-Bar polycentric knee designed for patients who need both safety and dynamics. It orchestrates the phases of the gait cycle to offer a harmonious solution among security, comfort and fluidity.

The **p-MRS system mechanically** detects the different gait phases and adapts stability accordingly. At heel strike, the system locks the knee geometrically and then cushions heel strike by a **stance flexion dampening feature. Plus selective lock function enables the patient to lock the knee manually whenever security is needed.**

At the pre-swing phase, the Symphony unlocks for a smooth and effortless switch to swing phase. The powerful and compact-sized hydraulic cylinder ensures a natural gait.

Rebound PCL – Össur’s Award-Winning Post-Surgery Knee Brace

Rebound® PCL, a Functional Healing® post-surgery knee brace, has been recognized by Orthopedics This Week as one of the eleven best Sports Medicine Technologies for 2016. Rebound PCL was the chosen recipient of the Sports Medicine Award for innovation in the rehabilitation category.

Rebound PCL is optimal for rehabilitation of posterior cruciate ligament (PCL) ruptures because this brace is designed to apply a physiologically correct, dynamic force. Rebound PCL can be effectively worn during functional treatment or post-surgical reconstruction. Rebound PCL can also be used for complex ligament reconstruction with PCL injury.

Cascade Dafo Launches New Transfer Pattern and Coloring Pages

Cascade Dafo, creators of the original DAFO® (Dynamic Ankle Foot Orthosis), has added an exclusive new transfer pattern named “Princess Party” to their collection of designs for custom DAFOs.

Princess Party fans can “try on” this colorful new pattern by going to the DAFO Creation Station on cascadedafocom. This

online interactive tool lets users view the various transfer patterns, strap, and padding colors with a virtual custom DAFO.

Also new on the Creation Station are DAFO Coloring Pages, companions to many of their unique new transfer designs. These pages can be easily downloaded and printed for coloring fun, and are a great way to get young patients excited about their new braces and keep them occupied in their practitioner’s office.

For more information, view the DAFO Creation Station at www.cascadedafocom/creation-station.

Keasy Thermoformable Cones : for making custom-made, fast and cost effective liners

Keasy is a prefabricated cone for manufacturing high-quality thermoformed liners in a blink. No welding, no gluing and seamless : KEASY’s regular thickness allows a vacuum thermoforming that perfectly

takes on the cast. According to the KEASY dimension, we recommend a 338°F heating temperature for 1' 15" to 3'.

Sweat and cleaning agents do not soak into the EVA closed cells structure: KEASY is easily washable and offers durable hygiene. KEASY withstands friction, crushing and stretching for patient’s durable comfort over the time. Available in 8 sizes.
